

Implementing gradient descent for multiple regression

5 questions

1. What is the value of the weight for sqft_living from your gradient descent predicting house prices (model 1)? Round your answer to 1 decimal place.

2. What is the predicted price for the 1st house in the TEST data set for model 1 (round to nearest dollar)?

3. What is the predicted price for the 1st house in the TEST data set for model 2 (round to nearest dollar)?

4. Which estimate was closer to the true price for the 1st house on the TEST data set, model 1 or model 2?

Model 1

☐ Model 2

5. Which model (1 or 2) has lowest RSS on all of the TEST data?

☐ Model 1

☐ Model 2
